

STRATEGIC MODEL

The Human-Centered Value Formation Model

*A synthesis of human insight,
cultural context,
and systemic forces*

STEP 1

Universal Human Insight

*Define the underlying human need
independent of product or category*

Examples:

- *desire for purpose*
- *desire for autonomy*
- *desire for self-expression*
- *desire for clarity*
- *desire for belonging*

Output:

A universal psychological motivation

STEP 2

Cultural Dynamics

Identify how culture amplifies, guides, or reshapes that need

Culture influences:

- *what is recognised as familiar*
- *what is considered desirable*
- *what feels out of alignment*
- *what is comfortable to express*
- *what signals naturally resonate*

Output:

A culturally attuned expression of the need

STEP 3

PEST Filtering

Use **Political, Economic, Social, and Technological** conditions to understand where the need becomes a viable opportunity space

Examples:

- *Political* → regulatory barriers, incentives
- *Economic* → purchasing power, resource constraints
- *Social* → shifting norms, demographic changes
- *Technological* → platform shifts, new interactions

Output:

The need becomes situated within real-world constraints

STEP 4

Emergent Demand Clusters

*Look beyond demographics;
identify by need intensity and readiness*

Categories:

- *Active Seekers (highly aware, looking for solutions)*
- *Latent Seekers (feel the need but haven't articulated it)*
- *Adjacent Seekers (nearby challenges, easy to engage)*
- *Non-Seekers (not an addressable group, even if the human need exists)*

Output:

The first true definition of a "customer"

STEP 5

Opportunity Definition & Prioritization

*Define which clusters form your early adopters,
using three tests*

Criteria:

- 1. Need intensity*
- 2. Adoption readiness*
- 3. Value perception*

Output:

A prioritized segment for your strategy

STEP 6

Value Architecture

Design your offering in layers

Value Layers:

Functional value → solves a problem

Emotional value → reduces anxiety or increases autonomy

Cultural value → signals identity, belonging, or worldview

***This is where cultural development
and strategy connect***

STEP 7

Strategic Positioning

*Design your work to follow the forces
that open new human possibilities*

- *cultural assumptions*
the invisible rules shaping perception
- *evolving behaviours*
the patterns ready for renewal
- *systemic gaps*
the spaces where needs remain open
- *emerging cultural currents*
the movements shaping what comes next

Output:

*A strategic concept that clarifies
why your contribution matters now
and what new possibility it enables*

STEP 8

Ecosystem Integration

Define how your solution plugs into a broader value ecosystem

Connections:

- *who it complements*
- *who it elevates*
- *who it empowers*
- *what it catalyzes*

***Especially effective
for creators and innovators***

MODEL SUMMARY

Human insight creates the spark.

Culture shapes its emerging form.

PEST shapes the conditions.

Segments shape the opportunity.

Value shapes adoption.

Positioning shapes meaning.

Ecosystems shape resilience.
